Austin Ventures' Milestones

Austin Ventures

World-class experience with local accessibility...

Austin Ventures has worked in partnership with talented entrepreneurs to help build some of America's most successful growth companies. The firm's particular focus on companies in Texas and the Southwest reflects both a confidence in the economic future of the region and a recognition that Austin Ventures can add more value to companies to which it is most accessible.

Since 1979, Austin Ventures has grown from a startup to the largest venture capital firm in the Southwest. With more than \$1.6 billion of capital under management, Austin Ventures is the third largest early-stage venture capital firm in the United States, according to VentureOne. Investing hundreds of millions of dollars in companies during early stages of development, Austin Ventures' expertise and funding have helped lead companies like Tivoli, Vignette, Crossroads Systems and others onto the road of success.

Specializing in five sectors of information technology...

Austin Ventures is unique in that it focuses *exclusively* on five sectors of information technology:

1. Semiconductors
2. Communications
3. Business-to-business e-commerce and services
4. Business-to-consumer e-commerce and media
5. Applications and infrastructure

Each sector is staffed by general partners, venture partners and investment professionals, allowing the firm to blend regional focus with a sophisticated world view in each practice area.
